EDUCATION

Texas Tech University

Bachelor of Science in Computer Science, Minor in Mathematics, GPA: 3.55

Lubbock, Texas

Graduated: May 2026

Relevant Coursework: Software Engineering

WORK EXPERIENCE

Backend Infrastructure Development

Independent Contractor.

Maintained, built, and optimized preexisting backend and cloud infrastructure for company's mobile app and web-site ensuring secure connection between the client server and secure user data through their existing restfulAPI, and database.

- Building the native iOS and web app for their platforms to ensure UI/UX compliance with AppStore and policies legal guidelines
- General day to day server maintenance and code documentation such as UML, Class, Sequence, Usecase, ER / EER diagrams.

PROJECTS

AI Contract Analysis Platform | [GitHub Repo](#)

Technologies: HTML, CSS, JS, pdf.js, Flask, FAISS

- Utilizes Document parsing and text chunking to generate semantic vector embeddings from FAISS.
- Embeddings are utilized to compare against known red and white flags and display to the user.
- Provides an in text citation for document highlighting, a short explanation, and categorized by severity level.
- Chat-Bot support when provided with a valid API key.

Snow's Site | [GitHub Site](#) | [Video's Page](#)

Technologies: Node-GYP, C, Node, Express, MySQL, HTML, CSS, JS

- Personal Course Notes search storage website, w/ search algorithm written in C, and per user hyperlink storage.
- Custom video player controls with scroll support for scrubbing,
- Desmos 2d Graphing using their API, has work arounds for loading saved graphs/synchronizing selected themes.
- Dynamic and smooth content resizing for different aspect ratios or window sizes.
- Utilizes ARGON-2 and JWT's for password hashing secure sessions and cookies for same-origin page synchronization,

Notes : Current Static GitHub Site uses UI for portfolio and has limited functionality. (C-Search algorithm works but is not on GitHub)

Theatre ticket purchase Client App, Server, and Database | [App Repo](#) | [Server/DB Repo](#)

Technologies: JavaFX, FXML, CSS, Node, Express, SQLite3

- Application allowing users to search for browse and purchase tickets (mock) from 6 different theater locations,
- Customer support for creating accounts, modifying user info, making reviews, and seeing past purchases.
- Administrators portal support for, modifying and adding, and viewing theatre viewings and their info, basic stats view per each theatre.
- Utilizes ARGON-2 and JWT's for password hashing and secure sessions

Notes : (DB is functional but doesn't use best practice. [LINK](#) demonstrates code closer to present knowledge).

TECHNICAL SKILLS

Programming Languages: C, C++, Java, JavaFX, JS, HTML, CSS, MySQL, Python.

Cloud Platforms: Microsoft Azure, AWS.

Analytics Tools: Excel & Microsoft Office, MATLAB, Tableau, Power BI.

Expertise: RestfulAPI's, Client Server Architecture, UI / UX, Full-Stack.
